

FLEET USE CASE

Playful cross-model exploration as research method

Watch another chat product live — slow starts and all — then archive outcomes

A specialist agent named **AI Chat Fun** owns **Playful cross-model exploration** in the SmarTekAI fleet — one job, persistent tools, public-safe receipts.

THE PROBLEM

Serious evaluation can get sterile. Watching another major chat product behave in real time — including awkward slow starts — complements title inventories and redacted session notes.

APPROACH

- 1 Field observation** — Direct a bot to open another chat product while the owner watches.
- 2 Pair with curation** — Sit beside OTHER AI's ingest of other-vendor sessions.
- 3 Publish patterns** — Capture behavioral takeaways, not verbatim private chats.
- 4 Keep it light but honest** — Play is part of the method, not a distraction from it.

MEASURED FLEET TELEMETRY

Metric	Value
Theme	Playful cross-model exploration
Main-agent JSONL lines	159
Real user messages	6
Assistant messages	81
Tool messages	67
Transcript size (approx)	~0.6 MB

Metric	Value
Fleet rank by transcript size	#11 of 12

WHY IT MATTERS

AI Chat Fun (159 lines) shows cross-model curiosity as deliberate research: treat other models as field sites, not only leaderboard rivals.

TAKEAWAYS

- Evaluation can be both playful and systematic.
- Archive outcomes as patterns; do not dump other vendors’ private content.
- Smaller lanes still teach — volume is not the only signal.

Privacy note: Patterns, theme labels, and aggregate transcript counts only. Withheld: credentials, emails, LAN/router IPs, device identifiers, agent memory files, and verbatim private conversations. If it would be awkward on a billboard, it does not ship.
