

FLEET USE CASE

Ingest and catalog other-AI chats for comparative learning

Curate cross-vendor sessions — publish patterns, withhold private case studies

A specialist agent named **OTHER AI** owns **Ingest & catalog other-AI chats** in the SmarTekAI fleet — one job, persistent tools, public-safe receipts.

THE PROBLEM

Evaluating models needs a corpus of other vendors' sessions — including failures — without turning private conversations into public leaks. One sensitive Gemini case study is noted as withheld on purpose.

APPROACH

- 1 **Ingest & catalog** — Title inventories and redacted summaries from other-AI chats.
- 2 **Mark outcomes** — Curate successes, mixed results, and failures as learning material.
- 3 **Withhold on purpose** — Note existence of private case studies without excerpting them.
- 4 **Feed the brand** — Comparative record supports SmarTekAI's public-safe lab notebook.

MEASURED FLEET TELEMETRY

Metric	Value
Theme	Ingest & catalog other-AI chats
Main-agent JSONL lines	295
Real user messages	3
Assistant messages	150
Tool messages	127

Metric	Value
Transcript size (approx)	~0.7 MB
Fleet rank by transcript size	#8 of 12

WHY IT MATTERS

OTHER AI (295 lines) plus an external grok.com title inventory shows the owner building a failure-forward corpus on purpose — for a public brand that refuses voyeurism.

TAKEAWAYS

- Publish patterns and outcomes; keep sensitive raw transcripts offline.
- Title inventories are useful before full-body ingest is ready.
- Withholding a private case study is a feature, not a gap to hide.

Privacy note: Patterns, theme labels, and aggregate transcript counts only. Withheld: credentials, emails, LAN/router IPs, device identifiers, agent memory files, and verbatim private conversations. If it would be awkward on a billboard, it does not ship.
